

This is the
STENO**TAPE** 915
CARTROMATIC
Instant, Automatic Loading

The Machine that makes
**Dictating and
Transcribing Easier
and More Convenient**
than ever before.

STENO TAPE 915

CARTROMATIC / *Instant, Automatic Loading*

Offers You

**The Simplest...Easiest...Most Convenient
Means of Dictating and Transcribing**

See how this combination of unique features enable you to communicate your ideas, your reports and your instructions — when they are fresh in your mind.

See how easy transcription is from CARTROMATIC and how it increases your secretary's efficiency — makes it more pleasant for her to put your dictation on paper.

**Instant, Automatic Loading
Makes It Easier and Faster
To Get Started**

On many machines, before you can start dictating or transcribing, there are levers to pull — doors to open — tapes to thread — or connections and adjustments to make.

Not so with the CARTROMATIC. All you do is drop the magnetic tape cartridge in place — and start. There's no fumbling, no threading — no adjustments. Fingers never touch the tape. It's simple.

**45 Minutes of Dictation Time on
each cartridge.**

DICTATING CONTROLS ARE AT YOUR FINGERTIP

This man's thumb is on the Start/Stop lever — a slight pressure activates it. When the "REC" button at the left is touched, the red light above glows softly and you know StenOtape CARTROMATIC is taking your dictation. To review what you have said, touch the Review button at the right.

On many other machines it is necessary to keep reaching over to the machine to find the right button or lever . . . a nuisance!

TWO SPEAKERS

One speaker is in the microphone for personal review of the material you've dictated. For greater volume and conference use, switch on the more powerful high-fidelity speaker in the machine.

DICTATE AS YOU NORMALLY SPEAK

There are no distracting adjustments to interfere with your thoughts. Your work gets done faster. You may hold the microphone in your hand — or if you prefer, lay it on the desk — or even leave it in its holder on the machine. No volume setting is required. The supersensitive microphone will pick up your normal conversational voice — crystal clear.

15 seconds before the end of the tape, a warning buzzer sounds.

Your dictation can be free of errors. To change a word, or a paragraph, back-space on the microphone just to the desired place — and dictate again. All previous dictation is automatically erased.

Fully transistorized, dictating and transcribing may be done at the very moment you wish.

MAGNETIC TAPE HAS BEEN PROVEN BEST

When an astronaut in orbit talks to his control station on earth, his voice is recorded on magnetic tape. Tape is also used for TV broadcasts and all professional music recordings.

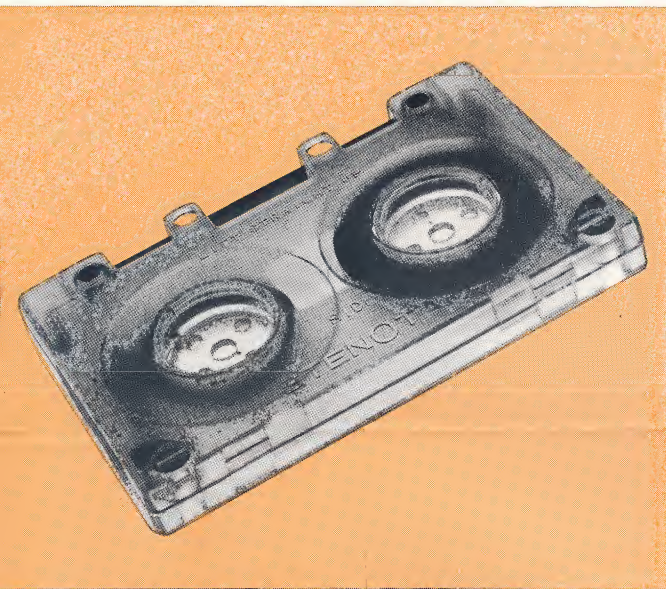

If you want clarity in office dictation, magnetic tape should be used. Until now, there has been a problem — to get the tape started. It had to be threaded, looped or hooked — or levers pulled just right or else it would jam. But no longer.

The CARTROMATIC's tape is in an enclosed cartridge. Just drop the cartridge into the machine — and start dictating or transcribing. It's Instant — and Automatic.

Magnetic tape is economical. CARTROMATIC has MYLAR unbreakable tape which can be used many thousands of times.

As you dictate, the sound previously recorded is automatically erased — or you may deliberately erase the entire dictation rapidly.

CARTROMATIC's special feature prevents accidental erasure by the secretary — a problem with many other machines.

TRANSCRIBING IS MORE COMFORTABLE — MORE ACCURATE

Secretaries are pleased to transcribe from the CARTROMATIC. They like the instant automatic loading of the cartridge — the absence of fuss in getting started. The voice comes through with amazing clarity — including the "ing", "ed" and "s" sounds which are lost on so many other machines.

She can also "tune" the voice for more comfortable listening — and can control volume.

Whether you dictate in a loud tone or a whisper, the CARTROMATIC compensates and records properly because of its automatic voice levelling.

The same machine may be used for dictation and transcription.

STENOTAPE 915

CARTROMATIC

Instant, Automatic Loading

StenOtape 915 CARTROMATIC . . .
complete with microphone, cradle,
cartridge loaded with unbreakable
MYLAR tape.

915 A Complete with Foot Pedal (FP-974)
and Earphone (EP-938)

915 B Complete with Fingertip Control
(HC-973) and Earphone (EP-938)

Any of the above combinations . . .
\$249.95

StenOtape — the Name That Means
Quality and Service.

StenOtape is a product of American
Geloso Electronic Inc., one of the
pioneers in electronic sound
equipment. Built into every
StenOtape unit are materials and
craftsmanship of unexcelled quality.
Each component is engineered to
give maximum trouble-free
performance. With each unit goes an
assurance of satisfaction backed by
American Geloso's international
reputation for producing the finest in
electronic sound equipment for the
office, for industry and for the home.

SPECIFICATIONS

StenOtape CARTROMATIC 915

Chassis — All transistor, solid state;
shock mounted; output 150 mw.

Tape-Speed — 1 7/8 IPS Dual track

Power — 110-120 volt A.C. 60 cycle,
with safety fuse. Power consumption
approximately 30 watts.

Manufactured to UL specifications.

Cabinet — Handsome two-tone high-
impact shock resistant Cyclocac.

Dimensions — 3 3/4" H x 11" W x 8" D.

Weight — 8 lbs.

Operating Time — 45 minutes

Capstan Drive

Fast-Forward rewind time — 140 sec.

Fast-Erase time — 140 sec.

Automatic-Stop Device with Buzzer

Automatic-Gain Control when dictating

Precision-Time indicator

Inputs (4) — Foot Pedal or Fingertip
Control

Telephone Microphone

Earphone

Microphone

Output — Monitoring
